Actionee HAIS

Sub Category

Subject Tracking/Logging of successful FTP pulls

Description of Problem or Suggestion:

It is important to know if science users have successfully pulled data from the DAAC for performance, statistical and (most important) user service reasons, but the design does not yet handle this.

Originator's Recommendation

Add a L4 requirement to track user pulls of data from the DAAC's data server. Evaluate design options (in cooperation with the DAACs), such as:

FTP log parsing/watching
Customized FTP service
Others

HAIS Response Date 5/10/95

This is a very good point and will be jointly addressed by CSS and Data Server designers. Specific discussions have begun concerning modification of the CSS supplied API which provides ftp services to log successful pulls of data into the history log. L4 requirements, where appropriate will also be added to DID 304.
